WebGoat application (in) security

an evaluation by
Anto Cvitic and Kristoffer Svensk

WebGoat

* Deliberatly insecure Java EE web application by OWASP - The Open Web Application Security Project

* Mission is to make web application security visible - by educating i.e
* WebGoat offers various lessons on many techniques in how to breach web appplications

* Is used by Google and Facebook to teach new employees

WebGoat

* Each lesson offers a lesson plan, background to the technique

* Hints are available

* Goal is to finish a lesson by successfully exploiting it

* Like a wargame

WebGoat

* Our aim is to evaluate the platform from a didactical point of view

* How well do the lessons teach vulnerabilities?

* Does it help in preventing same mistakes in our own applications?

* How can the lesson be improved?

* Write new lessons, send improvements
