

Centre for Sustainable Communications

The Centre for Sustainable Communications (www.mediated.kth.se) is a recently established Centre of Excellence at KTH Royal Institute of Technology in Stockholm to be funded over a ten-year period by VINNOVA, KTH and partners from Swedish industry and society.

The Centre will develop innovative applications of media and communications technologies that can contribute, directly or indirectly, to sustainable development by enabling collaboration, interaction and communication exchange between people in different locations. Furthermore, the Centre will develop innovative user-oriented services, products, environments, business models, methods and tools.

The Centre is a joint collaboration between the School of Computer Science and Communication (KTH-CSC) and the School of Architecture and the Built Environment (KTH-ABE). To perform interdisciplinary research and innovation, the Centre will promote knowledge exchange related to media technology, telecommunications, information technology, transport systems, sustainable strategies, social and cultural sciences, architecture, design and planning.

Partners include Ericsson, TeliaSonera, Bonnier AB, Tidningsutgivarna (Swedish Newspapers Publishers' Association), Boverket (The National Board of Housing, Building and Planning), Joltid AB, Stiftelsen Folkets Hubb (Community Hub Foundation), Sting (Stockholm Innovation and Growth), VTI (Swedish National Road and Transport Research Institute).
