Errata: A network that uses few active neurones to code visual input predicts the diverse shapes of cortical receptive fields

Martin Rehn and Friedrich T. Sommer

Journal of Computational Neuroscience 22:2, April 2007

There is an error in equations (89). The argument to the Heaviside function should be \( c_i(d_i - \theta/c_i - c_i/2) \), yielding the equations:

\[
y_i \leftarrow H\left(\frac{T_{ii}^2}{2} - \sum_{j \neq i} T_{ij}y_j - \theta\right) = H(c_i(d_i - \theta/c_i - c_i/2)) \tag{8}
\]

\[
b_i = c_i(d_i - \theta/c_i - c_i/2) \tag{9}
\]

with \( d_i = c_i - \sum_{j \neq i} C_{ij}c_jy_j \) \tag{10}

This does not affect any other parts of the paper, or the reported results. The authors sincerely thank Michael Gutmann, University of Helsinki, for bringing this to our attention.
