

SUMMARY

Quick Proof Complexity Course Poll

Please circle your answers.

1. I think we should decide on the schedule for the spring term:

ASAP |||

mid-November |||

December ||||
|||

2. Do you think that we should scribe lecture notes? As it looks now that would mean scribing one lecture each; with a possible bonus extra lecture for one or two interested students towards the end. 5 = yes, definitely; 3 = neutral, 1 = no, definitely not

|||

5

3. How much connections to practical SAT solving do you want to have? The default would be to cover the basics of the so-called DPLL method based on resolution, which is state of the art today, but we could try to do more (or less). 5 = as much practical connections as possible; 3 = default sounds fine; 1 = avoid applications and stick to proof complexity.

4. If we would have one or two guest lectures on applied SAT solving, they might not fit into our regular schedule (since the timing would depend on when the guest lecturers can make it). Would you be interested in attending a guest lecture even if they were given on, say, a Thursday morning in December? (When our schedule says Mondays only.) 5 = would be very interested; 3 = might or might not attend, neutral; 1 = very likely would not attend
